

Update and New Product Announcements

Business Information Technologies, Inc. is pleased to announce the following software releases. BITI, in conjunction with Microsoft's Empower program for developers, has employed the power of Microsoft's database solution, FoxPro, to enhance and develop the products being announced below. In addition, there are many new products in development for release later this year that will enhance BITI's GIS application offerings.

Census Traks Plus™ HMDA

December 2005

CTP HMDA has been updated with several new user friendly options to improve the ease of use of BITI banking module, CTP. The enhancements are a direct result of the information our users have requested for the product.

Coming in late 2006, will be the next release of the CTP HMDA, CRA and a new Exam module for banks to prepare for their external and internal audit reviews. The new release will employ Microsoft's latest FoxPro and SQL technologies.

ZIP+4 Geocoder

BITI has developed and is releasing a point geocoder which locates addresses to the ZIP+4 level (block face accuracy). The geocoder is available as a standalone or as an embedded DLL. The geocoder uses Microsoft's FoxPro database as its core technology. It has been successfully implemented in website applications, standalone applications, and as an embedded application in a variety of user generated code.
